Skills

- **Languages**: C++, Java, C, Python
- **Libraries**: NumPy, Pandas, Matplotlib, Seaborn, Plotly, Bokeh, SciPy
- **Tools/Platforms**: Microsoft Excel, Power BI, MySQL, Git, VS Code
- **Soft Skills**: Communication Skills, Creativity, Teamwork & Collaboration, Leadership

Internship

- **ShadowFox | Github** Mar'25 – Apr'25
  - Completed multi-level Data Science internship (Beginner to Advanced), performing exploratory data analysis and building Python-based analytical projects.
  - Built and documented multiple visualization and analytics projects using Pandas, NumPy, Matplotlib, and Seaborn.
  - Analyzed cricket fielding performance datasets and delivered actionable insights using statistical methods and visual dashboards.
  - Maintained a GitHub repository and submitted proof-of-work videos, improving technical documentation and project communication clarity.
  - **Tech Stacks :** Python, Pandas, NumPy, Excel, Matplotlib, Seaborn, VS Code

Projects

- **SmartDash (AI-Powered Predictive Analytics Dashboard) | Github** Feb'26
  - Built a complete AI-powered dashboard that connects a React frontend with a Python-based brain to give users instant, real-time data predictions.
  - Created a "smart" forecasting engine that doesn't need a fixed dataset; it learns instantly from whatever data or PDFs a user uploads to provide personalized insights.
  - Designed an interactive "What-If" simulator that lets users play with different business scenarios to see how small changes today affect their future growth.
  - Ensured 24/7 reliability and security by moving to a secure session-based login system and using "keep-alive" scripts to prevent the app from sleeping on free hosting.
  - **Tech Stacks :** React19,Vite,Tailwind CSS 4,Node.js,Express,MongoDB,Python,Flask,Scikit-learn,Pandas,Numpy,PyPDF,Vercel,Render,Cron-job.

- **Customer-Segmentation-Shopping-Trends | Github** Jun'25
  - Applied K-Means clustering on retail customer data to identify 4 distinct customer segments, enabling targeted marketing strategies.
  - Engineered features like Customer LifeTime Value (CLV) and Discount Sensitivity to improve segmentation accuracy.
  - Build an interactive Power BI dashboard to visualize customer behaviour and support data-driven marketing decisions.
  - Demonstrated potential to improve customer retention and personalized marketing effectiveness.
  - **Tech Stacks :** Python,Pandas,Numpy,Scikit-learn,Matplotlib,Seaborn,PowerBI

Certificates

- Computational Theory: Language Principle & Finite Automata Theory | **Certificate** Aug'25
- From Data to Decisions: A hands on approach to Data Science | **Certificate** Jul'25

Achievements/Co-Curricular Activities

- Secured 2nd runner-up in the Edurev Reel Competition for creating digital storytelling Oct'25

Education

- **Lovely Professional University** Phagwara, Punjab
  Bachelor of Technology - Computer Science and Engineering Since August 2023
- **Shri Vinayak Academy International Sr. Sec. School** Orai, Uttar Pradesh
  Intermediate April 2022 - March 2023
- **Jai Narayan Vidya Mandir Inter College** Kanpur,Uttar Pradesh
  Matriculation April 2020 - March 2021
